

Note, that cupsomatic "kidnaps" the printfile after application/vnd.cups-postscript stage and deviates i the CUPS-external, systemwide Ghostscript installati "pstoraster" filter (therefore also bypassing the CU "rastertosomething", and hands the rasterized file d backend...

cupsomatic is not made by the CUPS developers. It is contribution to printing development, made by people Linuxprinting.org. (see also http://www.cups.org/cup
